Company Overview

Here at Adkins Consultants, our professional quantity surveyors, structural engineers, and construction consultants work on both domestic and commercial projects throughout London, Kent and the southeast of England.

Our unrivalled knowledge of the construction industry and our exceptional level of customer service ensures that you receive the results you need for your construction project.

We offer a complete range of structural and civil engineering consultancy services to guide your project from start to finish. As a Consultancy Practice that prides itself on our friendly, innovative, and authentic approach we can work on every aspect of your project.

Through the delivery of solutions that are designed to maximise value, we bring creativity and innovation to all projects.

Our success is built on lasting relationships and repeat business. This allows us to develop in-depth understanding of client needs and tailor our services to provide efficient construction solutions that add real value.

In a challenging business environment, we seek to maintain our edge through the personal involvement of our Partners and by maintaining a highly skilled and local workforce who can produce cost effective, sustainable, and creative design solutions. This allows us to offer a responsiveness and flexibility that is reflected in our service delivery.

Whether the project is a multi-million pound commercial development or a small scale refurbishment scheme it receives the same attention to detail. We pride ourselves in our ability to deliver complex building solutions in a commercially driven manner that meets with the expectations of clients and architects.

Using state of the art engineering analysis software and BIM, coupled with good solid engineering knowledge and experience, we are able to provide our clients with solutions that are not only practical and elegant but also push the boundaries of innovation.

What we do

- Project management
- Civil & Structural engineering
 - Basement
 - Structural Alterations
 - Multi-Storey Buildings (including high-rise structures)
 - Temporary Structures
 - Industrial Warehouses
 - Foundations
 - Drainage Design
 - Drainage Strategy
- Client's consultation:
 - Cost optimisation
 - Structural optimisation
 - Technical check (safety, structural integrity, regulations)
- Quantity Surveying
- Party Wall Advice
- Building Surveying
- Contract Administration
- Estimating
- Bills of Quantities
- Engineering Expert Witness Services

How we work

Adkins Consultants was established in 2011, it has brought together experts in the construction industry to provide our clients with the dedication, knowledge, and experience to ensure your construction project runs as smoothly as possible.

Our vast amount of practical experience and qualifications mean that we know exactly how difficult construction projects can be, but our friendly and professional construction consultants are on hand to support you and answer any questions you may have.

For all projects we recognise that honest and regular client liaison is key to success with much of our work secured through repeat business and client recommendations on the basis of our open and friendly approach.

We take great care to tailor our services to each individual customer's requirement and our clients trust us to deliver solutions. Their first question is never *"Can be done?"* It is *"when we can do it, and how quickly?"*

At Adkins we pride ourselves on being a brand that consistently delivers a quality and personable service. It remains at the heart of everything that we do and stems from our culture – a client-first approach to every project and finding solutions where others cannot.

Our priorities

Our priorities are client care and satisfaction.

Structural Engineering

Here at Adkins Consultants, we carry out a wide range of structural engineering services, working with architects, construction teams, and other industry professionals to provide you with the most cost effective and innovative designs to meet all your needs. Whether you have a residential, commercial, or industrial project, our team of professional engineers has a wealth of experience of bringing projects of every size to life.

We provide the full range of structural engineering consultancy services from due diligence studies for land acquisition through to full design of all phases of a development project. We work in all the major sectors of the construction industry ranging from new building construction to refurbishment.

Building Information Modelling (BIM)

We have adopted BIM as a company-wide policy from the initial concept stage through to project completion, utilising the latest in industry software.

All BIM information related to a project is fully integrated and managed across the design team in the 3D environment utilising BIM level 2 as a minimum standard.

Our policy is implemented on a project specific basis to provide a tailor-made service for each individual client. We are committed to ensuring coordination of BIM information across the design team and can provide this service in addition to our initial appointment.

The fully coordinated model identifies real time construction issues during the initial design stage that can be addressed and overcome to save time and cost further into a project. The 3D environment allows for clash detection across disciplines at a very early stage ensuring clean, easy installation of structural elements, services and fit out with the prior knowledge and confidence that the project will come together problem free, eradicating site modifications and construction issues.

Well organised BIM coordination will identify constructability issues throughout the pre-construction stage – fix errors in design, avoid loops of clashes and coordinate perfectly the structural and architectural design. It allows system installation with zero conflict minimising the usual site installation issues. In addition, a BIM model will also save time and material/labour costs for better trade coordination and workflow.

Project visualisation is a simple schedule simulation that can be used to show the owner what the building will look like as construction progresses. Contractors can also use project visualisation to understand how the building will come together.

Structural Auditing Surveys

Adkins Consultants has a team of experts that undertakes structural surveys and audits, to benchmark against both your selected and industry standards, highlight any deficiencies and ensure you have the information you need to enable you to comply with your required protocols.

Structural Engineering audits and inspections are an essential part of both ongoing operations and new projects. Our team of experienced auditing engineers work with organisations across all sectors, to ensure their buildings and structures are structurally safe. Where we identify defects or potential problems, our bespoke software means our report, with photographic evidence, and practical guidance for remedial action, can be in our client's hand on the same day. It is about preventative maintenance and swift solutions, before a potential catastrophic and costly failure can take place.

We have a team of experts that undertake:

- structural surveys and audits
- benchmark against both client selected and industry standards
- highlight any deficiencies
- ensure that you have the information you need to enable you to comply with your required protocols

If you are planning to refurbish a building and you already have some knowledge and experience of the construction industry, you will find that our building fabric surveys will meet all of your needs. Our building surveyors will give you the guidance you need on the main structural components of your building, including roofs, external and internal walls, floors, and roof voids.

Quantity Surveyors

Whether you're building a single new home or a large residential, commercial or industrial development, Adkins Consultants will provide you with a complete range of services, including:

- Estimating, cost advice and lifecycle costing
- Advice on economies of design and value management
- Preparation of Bills of Quantities and pricing documents
- Procurement and contract advice
- Preparing tenders, analysis of returns and contract documents
- Post-contract cost control and financial reporting
- Interim valuation and agreement of the final account

Our team of experienced quantity surveyors regularly work with architects, construction companies and private individuals to ensure projects of every size run smoothly in the face of any development.

At Adkins Consultants, we understand just how important your project is, no matter how big or small. We're dedicated to providing you with only the highest quality services, and all projects are managed personally by one of our directors to ensure the work we produce for you is nothing less than flawless. We believe that communication is key, and we'll stay closely in contact with you throughout your project so you know exactly where we are with your quantity surveying.

We're passionate about what we do, and as well as providing you with exceptional services, you can rely on us to provide you with excellent customer service.

Party Wall

[As it is, but we are looking to add a blog with a YouTube video link with a Q&A.](#)

Careers Page (yet to build)

[Please add below Initial Text](#)

We are only as good as the people we employ. Our teams have a broad and deep wealth of expertise in everything from design, engineering and project management to highly specific, sought-after skills such as building information management and engineering.

Here at Adkins Consultants, we offer a working environment which is stimulating, challenging and rewarding. Training is provided for all staff ranging from technical seminars to other aspects which affect the working environment. For graduates and young engineers, we offer mentoring in the early years of their career and support junior staff through day release and modern apprenticeship schemes. From this they can proceed to achieve professional qualifications and Institution membership. All staff are encouraged and supported to develop their technical, management and business experience to enable growth into senior positions and complex engineering solutions.

[Could I please gain the job descriptions for each role please?](#)

[For this section we would like it to the sub sections to now be and include the following wording:](#)

Current vacancies

Have each section listed which we can upload a job when one becomes vacant:

- Quantity Surveying
- Structural Engineer
- Building Surveyor

Graduate Training

At Adkins Consultants the diverse and challenging nature of the work undertaken provides an ideal environment within which individuals can learn and develop. For Graduates this environment can provide the experience required for them to become members of the professional bodies appropriate to their chosen field.

Graduate training itself is undertaken in a structured manner with the development of the individual graduate being guided by experienced staff assigned to mentor the individuals. Adkins Consultants operates an ICE accredited training scheme.

Apprenticeships

Adkins Consultants Ltd run Apprenticeship schemes where you get to work and gain experience alongside qualified engineers, earning a wage whilst being given time to attend appropriate day release and other courses, funded by Adkins Consultants, which lead to work-related qualifications. If you are a school or college leaver and interested in pursuing an engineering career with us, then please send an initial email titled "Apprenticeship" with your CV to the office you are interested in joining.

Apply Now

[See attached application form to be uploaded.](#)

If you are interested in applying for any of the vacancies shown on the site or you would simply like to send us your details for further consideration, please download and complete the application form and simply email it to our office.

When returning the application form please include your CV or any supporting and relevant information.

Social Media

[Could I gain the links to all relevant profiles you'd like displaying please? I have LinkedIn purely as I have that but I don't have social media to find the other links.](#)

RE your questions around pulling LinkedIn into the page. Unfortunately, LinkedIn (as far as I'm aware at least) does not offer this sort of functionality. It is available via Facebook but that's not exactly the professional market place.
